Application Submit Flow

Feature: Renter submits a rental application through the listing wizard.

Fixes: Corrected submit pipeline ordering, Prisma validation errors, form state wiping, and silent completion failures.

Flow

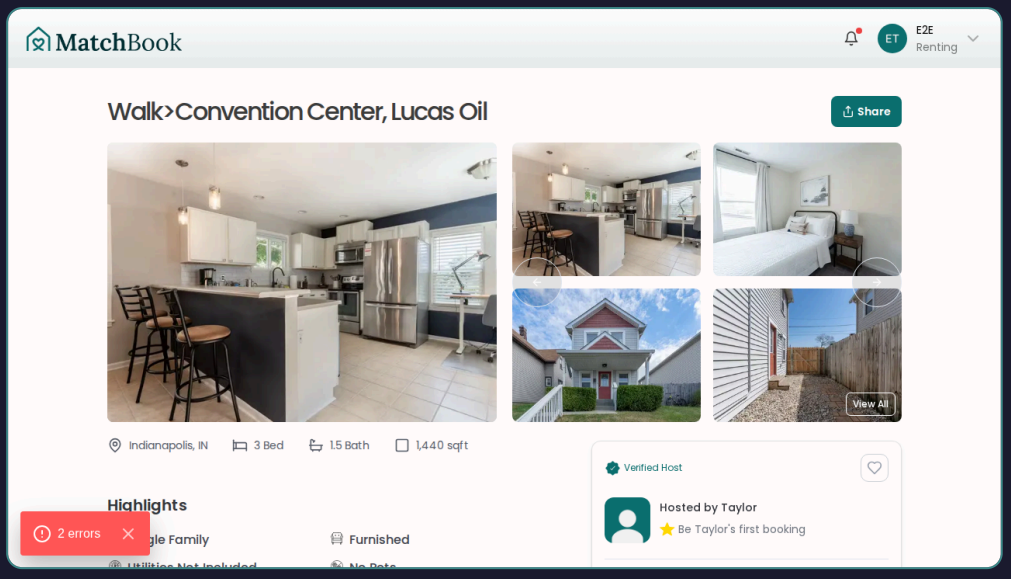
                Submitted!"     missing fields)
```

Desktop Flow

Step 1: Listing Page with Apply Action

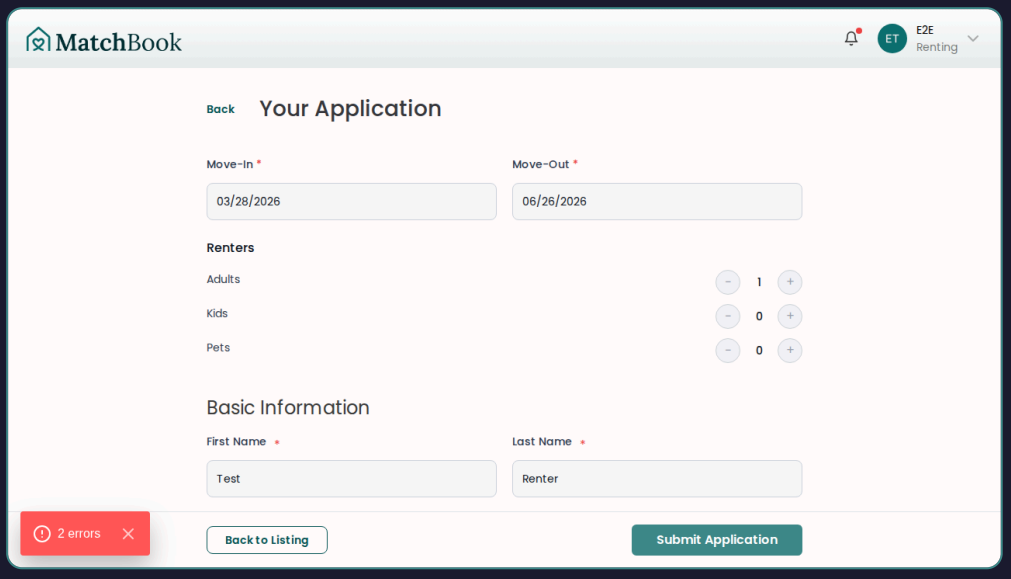
The renter views a listing with dates pre-filled. The action box shows “Apply Now”.



Listing page with Apply Now

Step 2: Application Wizard — Personal Info

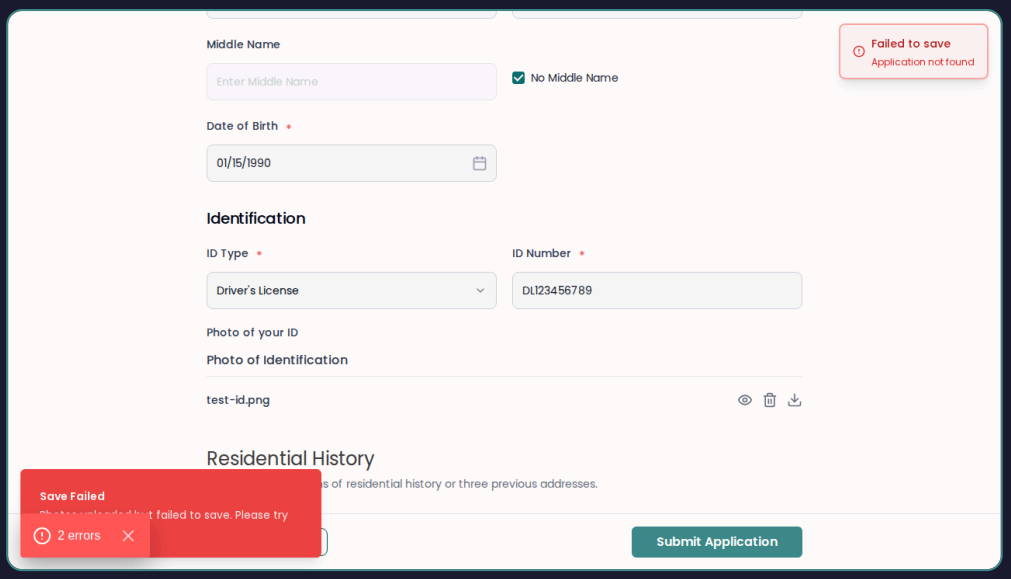
The wizard opens with trip context (move-in/out dates, guests) at the top. Personal info fields: first name, last name, middle name (or “No Middle Name” checkbox), date of birth.



Personal info section

Step 3: Application Wizard — Identification

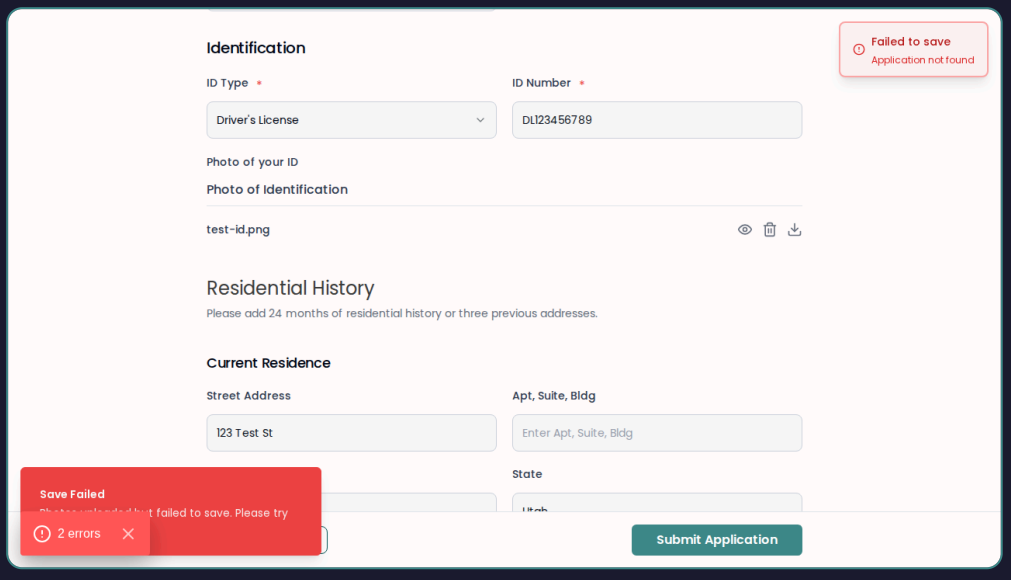
ID type dropdown, ID number, and photo upload via UploadThing.



Identification section

Step 4: Application Wizard — Residential History

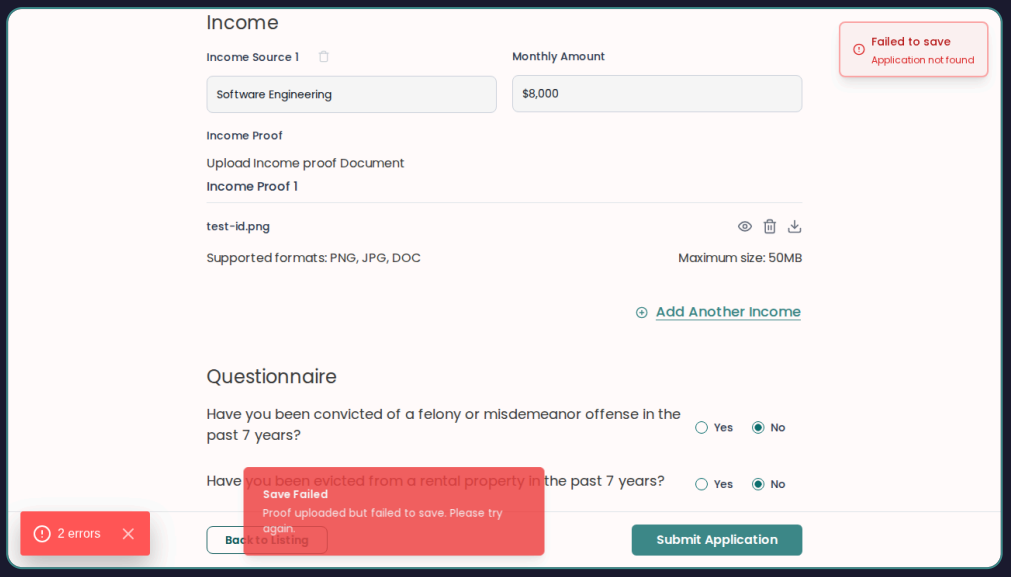
Current residence with address, duration, monthly payment, and housing status. If renting, landlord contact info is required. If duration < 24 months, a previous address is required.



Residential history section

Step 5: Application Wizard — Income & Questionnaire

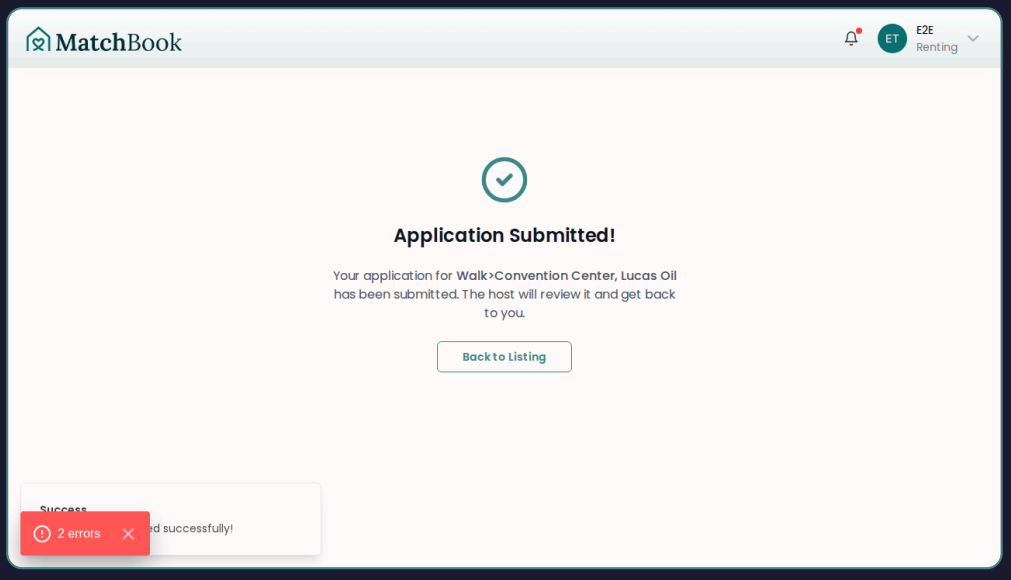
Income source, monthly amount, and proof upload. Questionnaire asks about felony and eviction history.



Income and questionnaire

Step 6: Submit — Success Screen

After clicking “Submit Application”, the pipeline runs: save → mark complete → apply. On success, the wizard transitions to a confirmation screen with a teal checkmark, “Application Submitted!” heading, and a “Back to Listing” button.



Success screen

Issues Found & Fixed

#	Issue	Impact	Fix
1	`markComplete` **result was ignored** — if the completion check failed, `handleSubmit` proceeded to `applyToListingFromSearch`, which then failed at `checkApplicationLimits` with a generic “Please complete your application” error	User saw a confusing error with no indication of what was missing	Now checks `markComplete` resu failure, shows a toast l specific missing requi (e.g. “Missing: ID phc Income proof”) and ha submission
2	**Empty residential history entries sent to server** — the Zustand store initializes with two residential history slots; the second (empty) one was always included in the upsert payload	Blank residential history records saved to DB on every application submit	`buildApplicationD` now filters entries whe address fields are fille before sending
3	`buildApplicationData` **included trip-level fields** — `moveInDate`, `moveOutDate`, `numAdults`, `numChildren`, `numPets` were spread into the application data but don’t exist on the Prisma Application model	Prisma validation error: `Unknown argument 'moveInDate'` — submissions always failed for new users	Removed trip-level fie from `buildApplicationD` return value
4	**Submit flow ordering was backwards** — `applyToListingFromSearch` (which checks `isComplete`) was called *before* the application was saved and marked complete	New users could never submit — the application didn’t exist yet when the completeness check ran	Reordered to: save application → mark co → apply to listing
5	`useEffect` **called** `resetStore()` **on every re-render** — `effectiveTripContext` was a new object reference each render, triggering the effect and wiping user-entered form data	Form fields cleared mid-submission when `revalidatePath` caused parent re-renders	Added `hasInitiali` ref guard in wizard + wrapped `effectiveTripCont` in `useMemo` in paren

#	Issue	Impact	Fix
6	`SaveStatusIndicator` **shown in submit wizard** — the auto-save status indicator (designed for `/applications/general` template editing) was displayed in the listing submit wizard, showing “Failed to save” / “Saving…” messaging from stale Zustand state	Users saw confusing “Failed to save” / “Application not found” banners during a submit flow where no auto-save occurs	Removed `SaveStatusIndicat` from the wizard; error now use “submit” lang instead of “save”

Completion Checklist (Server-Side)

The `checkApplicationCompletionServer` function verifies all of these before marking `isComplete: true`:

Requirement	Rule
First name	Non-empty
Last name	Non-empty
Middle name	Non-empty OR “No Middle Name” checked
Date of birth	Non-null
Identification	At least one ID with type + number + photo
Income	At least one with source + amount + proof (imageUrl or fileKey)
Felony question	Must be answered (not null)
Felony explanation	Required if felony = true
Eviction question	Must be answered (not null)
Eviction explanation	Required if evicted = true
Current address	Street, city, state, ZIP, duration of tenancy

Requirement	Rule
Landlord info	Required if housing status = “rent” (first + last name, email or phone)
Previous address	Required if current duration < 24 months (same field requirements)

Test Coverage

Test	File	Description
apply to listing with trip details (Story 07)	`e2e/renter-authed.spec.ts`	Full wizard fill + submit + assert success screen

Files Changed

- `src/app/search/listing/[listingId]/(components)/application-wizard.tsx` — reordered submit pipeline, removed trip fields from application data, added `hasInitialized` ref guard, check `markComplete` result, filter empty residential entries, removed `SaveStatusIndicator` and “save” language
- `src/app/search/listing/[listingId]/(components)/listing-detail-with-wizard.tsx` — wrapped `effectiveTripContext` in `useMemo`
- `e2e/renter-authed.spec.ts` — added Story 07 e2e test
- `e2e/renter-flow.md` — marked AP1 as tested
